Description

This is a nice feature that adds a shared document for the students' study group.

Users in the same group can work on a shared document - just like in Google Docs.

Description

Task assignment system under various user constraints.

The user selects his tasks, and each task has different time periods in which it can be performed, as well as the priority for each task.

Using a constraint satisfaction algorithm, the system schedule the tasks, and presents the user the assignment of his tasks.

Time Spent:	Not Specified		
Original estimate:	Not Specified		

Sprint:	Speech to Text
Rank:	0 i0000c:

Description

Sub Tasks:

The model supports transcription into English or Hebrew. The English keyword are: ['new', 'topic', 'end', 'topic], therefore, when the speaker wants to talk about a new topic in his lecture, he should say: "new topic", then the topic's name, and once he has finished saying the topic's name, he will say "end topic". Whatever he says from that moment, until the next time he says: "new topic" will be considered as the same part of his topic.

Symmetrically, the same thing is done with Hebrew, but with the keywords: [' ,'חדש', 'חדש', 'ונשא'].

For example, suppose we have an english audio file in which we wish to speak on two topics: "Compiler", and "Interpreter", so in the recording, when we want to start talking about compilers, we say: "new topic compiler end topic", then start talking about all the content related to compilers, after that say: "new topic interpreter end topic", and start talking about all the content related to interpreter. Finally he will get a transcript of the recording, which is

divided into two topics: "Compilers", "interpreter", and the timestamps that these two subjects learned.

Acceptance test

Upload an audio file and check if it's working \rightarrow say 'new topic' 'end topic' and check if the system recognized that you started a new topic, and write the topic's timestamps.

[LEC-2] As a user (student or lecturer), I want an upload button, so, I can		
upload my audio file (.m4a) to the system. Created: 02/Dec/21 Updated: 15/Jun/22 Resolved: 02/Mar/22

Description

sub tasks:

estimate:

Creates an upload button (only for .m4a files), and sends the audio files to the speech to text server.

Acceptance test:

Make sure the speech to text server gets the uploaded file, and the upload button only allows uploading .m4a files.
